

QA Automation Practical Assignment

Position: Senior QA Engineer

Company: Rocket.new

Platform Under Test: [Rocket.new](#) (Vibe Coding Platform)

Assignment Overview

As part of the evaluation process, you are required to complete a **two-part practical assignment** designed to assess your capabilities in:

- Manual QA testing
- Automation testing
- Test design and reporting
- Bug analysis
- Automation architecture thinking

Our platform, **Rocket.new**, enables users to build full-stack applications using AI prompts (Vibe Coding). The platform supports generating multiple application types, such as:

- Web Applications (React / NextJS)
- Websites
- Landing Pages
- Dashboards
- Internal Tool
- Mobile Applications (Flutter)

Your assignment will involve both **manual testing and automation testing of this platform**.

Assignment Objectives

The purpose of this assignment is to evaluate the following skills:

- Ability to understand and convert product requirements into structured test scenarios
 - Ability to identify and report bugs in a standardized format
 - Understanding of full-stack application flows
 - Automation design capabilities using **Playwright**
 - Ability to build intelligent testing workflows and reporting systems
 - Analytical ability to compare **expected vs actual output**
-

Task 1 - Manual Task

Build a Full-stack Application using Rocket

Task Description

Rocket supports generating multiple types of applications through AI prompts.

For this task, you are required to:

Build a **Fullstack E-Commerce Web Application (Clothing Store)** using the **ReactJS framework** on the Rocket platform.

The application must include both:

- **Customer Facing Application**
- **Admin Panel**

You must prepare **complete requirement documentation** before generating the application.

Application Requirements

The e-commerce platform should include all major functionality typically expected in an online clothing store.

User Side

- User Registration
- Login / Logout
- Product Listing
- Product Categories
- Product Detail Page
- Add to Cart
- Cart Management
- Checkout Flow
- Payment Integration
- Order Placement
- Order History
- Email Notifications

Admin Panel

- Admin Login
 - Product Management
 - Category Management
 - Order Management
 - Inventory Management
 - Customer Management
 - Dashboard Overview
-

Backend

You must use:

Database / Backend: Supabase

Integrations Required

You must implement at least:

- **Email Integration** (for notifications)
 - **Payment Integration** (for checkout flow)
-

Expectations

You must submit the following:

1 Requirement Documentation

Prepare a structured document (which you prepare for you task) containing:

- Application Overview
- Feature List
- Module Breakdown
- Page List
- Functional Requirements
- Integration Details
- Design guidelines

2 Live Application

Publish the application generated via Rocket and submit:

Published URL

3 Bug Reporting

During the development and testing process, you must identify and report bugs.

Bug reports must follow the **standardized format**.

Bug Categories

You may classify platform (Rocket.new) issues into:

- **Blocker Issues**
 - **Functional Issues**
 - **UI/UX Issues**
 - **Behaviour Issues**
 - **Must Have Improvements**
 - **Good To Have Improvements**
-

Task 2 - Automation Task

Build a Playwright Automation Agent

Task Description

You are required to build an **automation agent using Playwright** that automates the process of building applications on the Rocket platform.

The automation should simulate the entire process:

1. Login
2. Prompt generation
3. App creation
4. Publishing
5. Result analysis
6. Report generation

Automation Workflow

Your automation solution should follow the process below.

Step 1 - Accept User Input

The automation system should first ask for the following inputs:

Example Input:

Number of Apps: 3

Use Case: Web App

Technology: NextJS / React

Type of Application: E-commerce, Finance, ERP, etc

Step 2 - Generate Application Definitions

The system should connect with **ChatGPT** and generate application definitions based on the input.

Each definition should include:

- App Name
- Application Overview
- Module List
- Page List
- Feature List
- Functional Requirements

All generated definitions should be stored in: **Google Sheets**

Step 3 - Automated App Creation

The Playwright agent should:

1. Log in to the Rocket platform
2. Read application definitions from the Google Sheet
3. Generate applications one by one
4. Wait for code generation
5. Publish each application

After publishing: The system must store the **published URL** inside the Google Sheet.

Step 4 - Automated Application Analysis

After publishing each application, the system should automatically:

1. Visit the published URL
2. Analyse the application

The system should validate:

- Pages created vs expected
- Features implemented vs expected
- Missing modules
- Non-working features
- Broken pages
- UI issues
- Navigation issues

Step 5 - Generate Analysis Report

The system must generate a **comparison report** containing:

The report should be automatically written into the **Google Sheet for each application** wise.

Automation Expectations

Your automation solution should demonstrate:

- Good Playwright architecture
 - Reusable automation structure
 - Smart waiting strategies
 - Proper error handling
 - Clear reporting
-

Deliverables

You must submit the following:

1 Google Sheet

The sheet should include:

- Generated application definitions
- Published URLs
- Automated analysis reports

2 Automation Code

Submit the **Playwright automation project**, including:

- Source code
- Dependencies
- Setup instructions

Provide the code as a: **ZIP File**

3 Setup Instructions

Include a README with:

- Installation steps
- Environment setup
- Commands to run automation

4 Demonstration Video (Optional but Preferred)

A short video demonstrating:

- Running the automation script
- Application generation
- Report generation

This is considered a **plus point**.

Submission Guidelines

Please submit the assignment via email with the following items:

Task-1

- Requirement Documentation
- Application Published Link
- Bug Report Document

Task-2

- Google Sheet (Automation Reports)
- Playwright Automation Code (ZIP)
- Setup Instructions
- Optional Demonstration Video

Submission Deadline

Deadline:

Sunday, 8th March 2026 - 11:59 PM

ALL THE BEST
